Subject: TAKING PRIVATE PROPERTY FOR FRESHWATER SHORELINE PUBLIC ACCESS

To Whom it may Concern

I appreciate the format used for both the Freshwater and Marine water Shoreline Inventory and Characteristic, it is understandable, easy to review and for the most part accurate. (the West end reports are a nightmare)

Exceptions would be on #55 R1 Salt Creek conflicting and incomplete data and #57 Sekiu that has conflicting data. #64 West Twin River is a duplication of #63.

As **indicated below** with information taken from the Freshwater and Marine water Shoreline and Characteristic reports, there **is no shortage of Public Freshwater Land. It is the denial of public access to public land that creates the problem.**

With the abundance of public land the **use of the words**, some, informal, no formal, trail only and no access to the public, to public land that bothers me.

If more public access is needed, it is not the responsibility of Private Property Owner's to provide it.
