Subject: (32) Freshwater reaches impaired by water temperature

To Whom It may Concern

Freshwater reaches impaired by water temperature (32)
Marine reaches impaired by water temperature (6)

Contaminated Marine Reaches (5)
Contaminated Freshwater Reaches (2) plus **several**

(6) Six, temperature impaired freshwater reaches are on the Hoko River.

Development and people are not causing the elevated water temperatures.

Perhaps it is time for the scientific people to consider the elevated temperature of the water is from changing climate?

These statistics are from Clallam County Update Inventory and Characterization Report.

Please add this as my comment for the SMP update
