Subject: SMP Update Comment on Wetlands

TO WHOM IT MAY CONCERN

Taken from the Clallam County SMP Inventory and Characteristic report Dated June 2011.

Per ESA Adolfson consultant Jim Kramer

Wetlands are not included on SMP Update maps showing the areas that are a threat and risk of development.

Reach 1 Dungeness

Shoreline length 0.9 miles - Reach area 280.27 acres - **49% of the reach is identified as Wetland.**

Reach 2 Dungeness

Shoreline length 5.4 miles - Reach area 1053.37 acres - **49% of the reach is mapped as Wetland habitat.**

Reach 3 Dungeness

Shoreline length 3.6 miles - Reach area 366.52 acres - **14% of the reach is identified as Wetland habitat.**

Private property owners not being informed of this this vital Wetland information at SMP Update public forums.

As Kaj said at the last Committee meeting, private property owners need to know what impact the SMP update will have on their property.

Wetland areas must be identified for full disclosure to private property owners on the impact of the SMP update.

I submit this as my comment for the SMP Update

Pearl Rains Hewett

SMP Invited committee member
