Subject: SILT DAMAGE FROM ELWHA TO DUNGENESS SPIT?

To Whom it May Concern

SILT DAMAGE FROM ELWHA TO DUNGENESS SPIT?

The damage from the removal of the dams has been studied to death.
Is this a too little, to late, post mortem study of silt damage?

Helen Anderson (360) 808-4984 representative of the "**Costal Watershed Institute**", a non-profit organization is doing invertebrate studies at 16 sites on the Straits of Juan DeFuca.

Starting at the mouth of the Elwha River with 16 identified sites to examine the environmental impact on invertebrates caused by the silt from the removal of the dams.

How do I know this?

Helen called me to get permission to go on our Bagley Creek property. It is one of the identified sites for their investigation of the environmental impact on invertebrates caused by the silt from the removal of the dams.

Prior to giving her permission to go on our private property, I asked quite a few questions. She did mentioned the Department of Fish and Wildlife? I requested a copy of the report when it is completed.

FYI
