Subject: Clallum County's SMP

Please use the latest climate forecast data in finalizing the Shoreline Management Plan.

It is imperative that all due precautions are taken in alerting Clallum County's shoreline property owners, prospective buyers and real estate agents, as well as city and county planning agencies about the effects of projected rising sea levels, bluff and beach erosion and worsening storm surges and their inherent damage. We also must do all we can to protect our shoreline's fragile ecosystems from manmade barriers that would disrupt natural beach movement and their biological communities.

Thanks you for taking into consideration the latest climate science. I feel that is the smart way to go in in the best interests of all of us here in the county.

Sincerely,  
Anita Matthay
