Subject: Comments on the Draft Shoreline management program

Please make sure that the plan forces the use of the latest scientific study results. Specifically for Clallam County, sea level rise mitigation study is currently happening now and will be ready in October. Plan needs to reflect these types of new studies. These studies should be the basis of where we should develop. Land shown to flood in the near future should be off limits to development. The plan needs to be flexible enough to adapt to the latest information.

Finally, when homes need protecting, the required use of bioengineered protective solutions needs to be stated in the plan.

Thanks!
