Shoreline Environmental Designations provide a framework for SMP policies and regulations based on their characteristics. The SMP applies to parcels for segments thereof, with a mean annual flow of 20 cfs, lake greater than 20 acres, and marine waters, together with their underlying lands and associated shorelands. The mapped jurisdictional extent is based on the approximate location of areas within 200 feet of the low-water mark (SWAMM) and tidelines, 15- to 20-foot established, and associated wetlands. The settlement pattern extends to the urban areas, and the zone of influence in which the historical settlement occurred is included in the boundary. Cities, or lands held in trust by the U.S. for Indian Tribes.

About the Map

Shoreline Environmental Designations (SED) Map

Data Sources: Clallam County, 2011 Orthophoto. Channel Migration Zone (Ecology 2013), Coastal Bluff (Coastal Geologic Data Sources), and other datasets. The best available source of SED jurisdiction requires professional judgment and site-specific information.
