Shoreline Environmental Designations (SED) Map

About the Map

Shoreline Environmental Designations provide a framework for SMP policies and regulations based on their characteristics. The SMP applies to streams (or segments thereof) with a mean annual flow of 20 cfs, lakes greater than 20 acres, and marine waters; together with their underlying lands and associated shorelands. The mapped jurisdictional extent is based on the approximate location of zones within 200 feet of the ordinary high water mark (OHWM) and floodplains, 100-year floodplains, and associated pluvials. The full jurisdictional extent also includes critical areas and the offshore extent of marine waters and associated marine waters, Tribal lands, and lands held in trust by the U.S. for Indian Tribes. The exact physical location of SMP jurisdiction requires professional judgment and site-specific information.
