About the Map
Shoreline Environmental Designations (SED) Map provides a framework for SMP policies and regulations based on their characteristics. The SMP applies to streams (or segments thereof) with a mean annual flow of 20 cfs, lakes greater than 20 acres, and marine waters, together with their underlying lands and associated shorelands. The mapped jurisdictional extent is based on the approximate location of areas within 200 feet of the ordinary high water mark (OHWM) and floodway, 100-year floodplain, and associated wetlands. The full jurisdictional extent also includes other areas and the actual physical location of SMP jurisdiction requires professional judgment and site-specific information.

Data Sources: Clallam County, 2011 Orthophoto; Channel Migration Zone (Ecology 2013); Coastal Bluffd, Unstable (Wa. State Coastal Atlas); Feeder Bluffs (Coastal Geologic Services 2012) and 20 cfs points (US Geological Survey).
